PROFESSIONAL SUMMARY

Computer Science (AI and ML) undergraduate at CMR Technical Campus who ships production-ready full-stack applications end to end, from an AI-integrated cloud architecture tool to an institutional platform built for my department's HOD. Frontend Development Intern at Unified Mentor IT Solutions (CourtX), backed by 580+ problems solved across LeetCode, Codeforces, and CodeChef.

WORK EXPERIENCE

Frontend Developer Intern

Unified Mentor IT Solutions | May 2026 - August 2026

- Worked as a Frontend Development Intern building CourtX, a sports court discovery and booking platform, translating requirements into responsive, production-ready UI components in React.js.
- Owned frontend features end to end, from component design through integration, and iterated through review cycles with the mentor team to refine deliverables.
- Documented the project scope, architecture, and outcomes in a complete internship report.

EDUCATION

B.Tech, Computer Science and Engineering (AI and ML)

CMR Technical Campus, Hyderabad | August 2024 - May 2028

Relevant Coursework: Data Structures and Algorithms, OOP, Web Development, Machine Learning (intro), DBMS

TECHNICAL SKILLS

- **Languages:** C, Python, Java, JavaScript (ES6+)
- **Frontend:** HTML5, CSS3, React.js, DOM Manipulation, Responsive Design
- **Frameworks and UI:** Bootstrap 5, Flexbox, CSS Grid, CSS Animations
- **Backend and Database:** Node.js, SQL (basics)
- **Tools:** Git, GitHub, VS Code, Netlify, npm
- **AI-Augmented Workflow:** Claude AI and Codex used as force-multipliers within a standard build-review-ship process
- **Interests:** Machine Learning (beginner level, eager to explore further), AI tools and automation

PROJECTS

Node Studio - AI-Powered Cloud Architecture Design Tool

React 18, TypeScript, Vite, React Flow, Dagre.js, Node.js/Express, Gemini 2.0, Firebase, Dexie, LiveKit

- Built a full-stack, AI-powered cloud architecture design tool using React 18, TypeScript, Vite, and React Flow, featuring auto-layout algorithms powered by Dagre.js.
- Engineered a real-time architectural rule validation engine that lints connection semantics across 40+ cloud components to prevent security vulnerabilities and anti-patterns, and integrated the Gemini 2.0 AI API via a Node.js/Express service to automate architecture generation from natural language prompts with instant AI-driven security and scalability reviews.
- Implemented offline-first local persistence (Dexie/IndexedDB) with Firebase Auth and Firestore cloud backup, plus LiveKit voice/collaboration and PDF/HTML audit-report export pipelines.

CodeTrack - Department Coding Profile and Analytics Platform

React.js, Node.js, Firebase Auth (OTP), Supabase/PostgreSQL, Live Platform APIs

- Built a centralized platform for CSE-AIML department students to register their LeetCode, Codeforces, and GeeksforGeeks usernames or profile URLs alongside their roll number and email for verified recognition.
- Implemented Firebase Authentication with OTP verification for secure onboarding, storing student and profile-mapping data in Supabase/PostgreSQL, and engineered a live data-fetching pipeline for real-time problem-solved counts, submission activity, and contest ratings with no platform data persisted.
- Designed an HOD-facing dashboard where selecting a student's roll number surfaces total problems solved, a consistency score, and global and local (department) rankings, with automated report export for the whole department.

COMPETITIVE PROGRAMMING

LeetCode: 217 problems solved, Rating 1343 (peak 1430) **CodeChef:** 326 problems solved, Rating 1265 (peak), Global Rank 17,502

Codeforces: approximately 40 problems solved

SOFT SKILLS

Problem Solving, Quick Learning, Team Collaboration, Communication, Attention to Detail, Adaptability
