**Portfolio:** ritishfo.netlify.app

---

## PROFESSIONAL SUMMARY

Motivated Computer Science (AI & ML) undergraduate at CMR Technical Campus with solid hands-on skills in HTML, CSS, JavaScript, and React. Comfortable building responsive, interactive web pages and working with Git for version control. I enjoy turning ideas into clean, working interfaces and am always looking to learn and improve. Actively seeking a frontend internship where I can contribute to real projects and grow alongside an experienced team.

---

## TECHNICAL SKILLS

**Languages:** C, Python, Java, JavaScript (ES6+)

**Frontend:** HTML5, CSS3, React.js, DOM Manipulation, Responsive Design

**Frameworks & UI:** Bootstrap 5, Flexbox, CSS Grid, CSS Animations

**Backend & DB:** Node.js, SQL (basics)

**Tools:** Git, GitHub, VS Code, Netlify, npm

**AI-Assisted Dev:** Prompt engineering with Claude AI & Codex to scaffold and build full-stack projects

**Interests:** Machine Learning (beginner level, eager to explore further), AI tools & automation

---

## PROJECTS

**DevLens — GitHub Profile Visualiser** *React.js · Chart.js · GitHub API · Netlify*

- ▶ A web app where you type any GitHub username and instantly see a visual breakdown of that person's coding journey — top languages, most starred repositories, and a developer personality card. Built with React and deployed live on Netlify.
- ▶ Built with the help of AI tools (Claude AI & Codex) using detailed prompts — independently reviewed, customised, and deployed.

**FocusRoom — Productivity Timer App** *React.js · Node.js · MongoDB · Web Audio API [In Development]*

- ▶ A Pomodoro timer app combined with a layered ambient sound mixer (rain, café, forest sounds). Users can track their focus sessions and see a weekly productivity chart. Features Google login and session history.
- ▶ Developed using AI-assisted prompting (Claude AI & Codex) — prompts written from scratch, code reviewed and integrated independently.

**PixelPoll — Live Collaborative Canvas** *React.js · Socket.io · Node.js · Canvas API [In Development]*

- ▶ A shared pixel art canvas where anyone can draw and see every other user's strokes appear in real time via WebSockets. Includes live chat, a user counter, and drawing tools like fill bucket and eraser.
- ▶ Built using AI-assisted development (Claude AI & Codex) with custom prompts — code reviewed, understood, and deployed by me.

**TaskPing — Smart To-Do with Phone Notifications** *HTML5 · CSS3 · JavaScript · Node.js · Web Push API [In Development]*

- ▶ A task manager where users set a due time for each task and receive a real push notification directly on their phone or desktop at that exact time — even when the browser is closed. Built on the Web Push API and service workers so no app install is needed.
- ▶ Core idea: users add tasks with a title, description, and a specific reminder time. The app schedules a background notification that fires at the right moment.

## Plouton Finance Website HTML5 · CSS3 · JavaScript · Netlify

- ▶ A responsive finance landing page with smooth scrolling, animated sections, and a contact form — built entirely from scratch with vanilla HTML, CSS, and JavaScript. Deployed live on Netlify.

## AI Assistant — Python Automation Python

- ▶ A command-line tool that automates small daily tasks like file organisation and quick web searches. Built using Python's standard library — my first real Python project.

## E D U C A T I O N

---

### B.Tech — Computer Science & Engineering (AI & ML)

*Aug 2024 – May 2028*

*CMR Technical Campus, Hyderabad*

**Relevant Coursework:** Data Structures & Algorithms · OOP · Web Development · Machine Learning (intro) · DBMS

## S O F T S K I L L S

---

Problem Solving · Quick Learning · Team Collaboration · Communication · Attention to Detail · Adaptability

## C E R T I F I C A T I O N S & L E A R N I N G

---

- ▶ Full Stack Web Development — currently self-learning React, Node.js, and MongoDB through online resources and hands-on projects.
- ▶ Git & GitHub — version control basics, branching, pull requests, and working with remote repositories.
- ▶ Machine Learning — introductory coursework covering basic concepts; actively interested in exploring this further.
